

REMARKS

The Final Office Action mailed October 22, 2007 has been received and carefully noted. Claims 1-30 are currently pending in the subject application and are presently under consideration.

Claims 1, 10, 16, 19, and 25 have been amended herein. A listing of claims can be found on pages 2-9 of this Reply.

Favorable reconsideration of the pending claims is respectfully requested in view of the amendments and the following comments.

I. Rejection of Claims 1-30 Under 35 U.S.C. §103(a)

Claims 1-30 stand rejected under 35 U.S.C. §103(a) as being unpatentable over Liu *et al.*, *New Fast Algorithms for the Estimation of Block Motion Vectors*, IEEE Vol. 3, No. 2, April 1993, in view of Pullen *et al.* (U.S. Patent No. 5,923,376). It is respectfully requested that these rejections be withdrawn for at least the following reason. Liu *et al.* and Pullen *et al.*, alone or in combination, do not teach or suggest all the claim limitations.

In particular, independent claims 1, 10, 16, 19, 25, 27, and 29 recite a similar limitation:

determining a set of K candidate blocks $B_1..B_K$, where each block B_i , for $i=1$ to K , is identified by pixels in search set S_i and minimizes a first distortion function relative to the target block, the first distortion function based only on a set of two or more pixels from the target block and a set of two or more pixels from block B_i , wherein each pixel from the set of two or more pixels from the target block is collinear with all other pixels in the set of two or more pixels from the target block and each pixel from the set of two or more pixels from block B_i is collinear with all other pixels in the set of two or more pixels from block B_i ;

determining which candidate block of the set of K candidate blocks $B_1..B_K$ minimizes a second distortion

function relative to the target block;

(emphasis added).

Regarding Liu *et al.*, subsampling involves the use of pixels in an alternating manner (See Liu *et al.*, Figure 1). In Figure 1, pixels labeled a, b, c, and d are patterned across the block. Based on the “schedule” shown in Figure 2, pixels of one pattern out of a, b, c, and d are used. For example, at location 1, pattern a is used, at location 2, pattern b is used, *etc.* As pixels of the same label (a, b, c, or d) are not in the same line, **each** pixel from a set of two or more pixels is not **collinear with all** other pixels in the set of two or more pixels. Rather, the pixels would form a block of more than one line. Thus, Liu *et al.* does not teach or suggest all the aspects of the independent claims.

With respect to Pullen *et al.*, Figure 3 involves a decompressor that would apply the “motion vector to a corresponding block in a previous frame buffer to generate a block of video data which corresponds to a block of data in a current frame” (See Pullen *et al.*, col. 11, ll. 24-27). As the block of Figure 3 includes pixels of more than one line (*e.g.*, 4x4 pixel blocks), Pullen *et al.* also does not teach or suggest **each** pixel from a set of two or more pixels is not **collinear with all** other pixels in the set of two or more pixels. Instead, a 4x4 pixel block would include pixels of two rows and columns. Therefore, Pullen *et al.* does not teach or suggest all the aspects of the independent claims.

Any dependent claims not mentioned above are submitted as not being anticipated or obvious, for at least the same reasons given above in support of their base claims.

It should be noted that not all of the assertions made in the Office Action, particularly those with respect to the dependent claims, have been addressed here, in the interest of conciseness. Applicants reserve the right to challenge any of the assertions made in the Office Action by the Examiner, with respect to the relied upon art references and how they would relate to Applicants’ claim language, including the right to swear behind or otherwise remove an improper art reference.

CONCLUSION

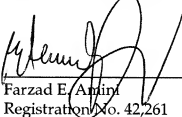

In view of the foregoing, it is believed that all claims now pending patentably define the subject invention over the prior art of record, and are in condition for allowance and such action is earnestly solicited at the earliest possible date. If the Examiner believes a telephone conference would be useful in moving the case forward, he is encouraged to contact the undersigned at (310) 207-3800.

If necessary, the Commissioner is hereby authorized in this, concurrent, and future replies, to charge payment or credit any overpayment to Deposit Account No. 02-2666 for any additional fees required under 37 C.F.R. §§ 1.16 or 1.17, particularly extension of time fees.

Respectfully submitted,

BLAKELY SOKOLOFF TAYLOR & ZAFMAN LLP
